Combating Security Challenges in the Age of Big Data

This book addresses the key security challenges in the big data centric computing and network systems, and discusses how to tackle them using a mix of conventional and state-of-the-art techniques. The incentive for joining big data and advanced analytics is no longer in doubt for businesses and ordinary users alike. Technology giants like Google, Microsoft, Amazon, Facebook, Apple, and companies like Uber, Airbnb, NVIDIA, Expedia, and so forth are continuing to explore new ways to collect and analyze big data to provide their customers with interactive services and new experiences. With any discussion of big data, security is not, however, far behind. Large scale data breaches and privacy leaks at governmental and financial institutions, social platforms, power grids, and so forth, are on the rise that cost billions of dollars. The book explains how the security needs and implementations are inherently different at different stages of the big data centric system, namely at the point of big data sensing and collection, delivery over existing networks, and analytics at the data centers. Thus, the book sheds light on how conventional security provisioning techniques like authentication and encryption need to scale well with all the stages of the big data centric system to effectively combat security threats and vulnerabilities. The book also uncovers the state-of-the-art technologies like deep learning and blockchain which can dramatically change the security landscape in the big data era.

Forests and Food

As population estimates for 2050 reach over 9 billion, issues of food security and nutrition have been dominating academic and policy debates. A total of 805 million people are undernourished worldwide and malnutrition affects nearly every country on the planet. Despite impressive productivity increases, there is growing evidence that conventional agricultural strategies fall short of eliminating global hunger, as well as having long-term ecological consequences. Forests can play an important role in complementing agricultural production to address the Sustainable Development Goals on zero hunger. Forests and trees can be managed to provide better and more nutritionally-balanced diets, greater control over food inputs—particularly during lean seasons and periods of vulnerability (especially for marginalised groups)—and deliver ecosystem services for crop production. However forests are undergoing a rapid process of degradation, a complex process that governments are struggling to reverse. This volume provides important evidence and insights about the potential of forests to reducing global hunger and malnutrition, exploring the different roles of landscapes, and the governance approaches that are required for the equitable delivery of these benefits.

Forests and Food is essential reading for researchers, students, NGOs and government departments responsible for agriculture, forestry, food security and poverty alleviation around the globe.

A brilliant distillation of the key ideas behind successful self-improvement practices throughout history, showing us how they remain relevant today \"Schaffner finds more in contemporary self-improvement literature to admire than criticize. . . . [A] revelatory book.\"--Kathryn Hughes, Times Literary Supplement Self-help today is a multi-billion-dollar global industry, one often seen as a by-product of neoliberalism and capitalism. Far from being a recent phenomenon, however, the practice of self-improvement has a long and rich history, extending all the way back to ancient China. For millennia, philosophers, sages, and theologians have reflected on the good life and devised strategies on how to achieve it. Focusing on ten core ideas of self-improvement that run through the world's advice literature, Anna Katharina Schaffner reveals the ways they have evolved across cultures and historical eras, and why they continue to resonate with us today. Reminding us that there is much to learn from looking at time-honed models, Schaffner also examines the ways that self-improvement practices provide powerful barometers of the values, anxieties, and aspirations that preoccupy us at particular moments in time and expose basic assumptions about our purpose and nature.

The Art of Self-Improvement

Uses the framework of 'market in state', to argue that the Chinese economy is state-centered, dominated by political principles over economic principles.

Although the bioarchaeology (study of biological remains in an archaeological context) of Egypt has been documented in a desultory way for many decades, it is only recently that it has become an inherent part of excavations in Egypt. This volume consists of a series of essays that explore how ancient plant, animal, and human remains should be studied, and how, when they are integrated with texts, images, and artefacts, they can contribute to our understanding of the history, environment, and culture of ancient Egypt in a holistic manner. Topics covered in this volume relating to human remains include analyses of royal, elite and poor cemeteries of different eras, case studies on specific mummies, identification of different diseases in human remains, an overview of the state of palaeopathology in Egypt, how to analyse burials to establish season of death, the use of bodies to elucidate life stories, the potential of visceral remains in identifying individuals as well as diseases that they might have had, and a protocol for studying mummies. Faunal remains are represented by a study of a canine cemetery and a discussion of cat species that were mummified, and dendroarchaeology is represented by an overview of its potentials and pitfalls for dating Egyptian remains and revising its chronology. Leading international specialists from varied disciplines including physical anthropology, radiology, archaeozoology, Egyptology, and dendrochronology have contributed to this groundbreaking volume of essays that will no doubt provide much fodder for thought, and will be of interest to scholars and laypeople alike.

Years after running away from an abusive foster family, Asher Davis still struggles with the guilt of leaving his foster brothers behind. He's climbed to unimaginable heights as a ruthless, high-powered attorney, creating a life of power and control and takes whatever and whomever he wants. Blaming himself for the death of his parents, Dr. Drew Klein retreats into a shell of loneliness, merely going through the motions of life. After a disastrous, short-lived marriage, Drew leaves his lucrative medical practice to set up a clinic for abused young men and women. The decision has more repercussions than Drew could ever imagine when the dark and sensual Ash Davis volunteers to help. Although Drew isn't gay, Ash is inexplicably drawn to him. He vows to simply bed him and forget him like he's done with every other man. However, Drew's sweet and caring nature and unexpected passion both stun and frighten Ash, who questions his right to any happiness at all. And when Ash befriends an abused young man who unwittingly draws the clinic into danger, threatening Drew's safety and that of his beloved grandmother, Ash discovers that there is nothing he won't sacrifice to protect the love he never thought he'd find. *A Walk Through Fire* is an *Enemies to Lovers* Gay Contemporary Romance with a Happily Ever After. If you love broken alpha males with a heart of gold, you'll love Ash and Drew's story.

A Walk Through Fire

Humanitarians are required to be impartial, independent, professionally competent and focused only on preventing and alleviating human suffering. It can be hard living up to these principles when others do not share them, while persuading political and military authorities and non-state actors to let an agency assist on the ground requires savvy ethical skills. Getting first to a conflict or natural catastrophe is only the beginning, as aid workers are usually and immediately presented with practical and moral questions about what to do next. For example, when does working closely with a warring party or an immoral regime move from practical cooperation to complicity in human rights violations? Should one operate in camps for displaced people and refugees if they are effectively places of internment? Do humanitarian agencies inadvertently encourage ethnic cleansing by always being ready to 'mop-up' the consequences of scorched earth warfare? This book has been written to help humanitarians assess and respond to these and other ethical dilemmas.

This two-volume collection of essays addresses the Latino/a experience in present-day America, covering six major areas of importance: education, health, family, children, teens, and violence. The Latino/a presence in this country predates the United States itself, yet this group is often marginalized in the American culture. Many noted experts explore the ideology behind this prejudicial attitude, examining how America views Latinos/as, how Latinos/as view themselves, and what the future of America will look like as this group progresses toward equitable treatment. Through the exploration process, the book reveals the complexity and

diversity of this community, tracing the historical trajectories of those whose diverse points of origin could be from almost anywhere, including the Americas, Europe, or other places. Written with contemporary issues at the forefront, this timely collection looks at the resolve of the Latino people and considers their histories, contributions, concerns, and accomplishments. Pointed essays address disparate quality-of-life issues in education, health, and economic stability while depicting individual and group efforts in overcoming barriers to mainstream American society. Each chapter discusses key challenge areas for the Latino American population in everyday life. An engaging "Further Investigations" feature poses questions about most of the essays, leading to critical thinking about the most important topics affecting Latino/as today.

Forest trees cover 30% of the earth's land surface, providing renewable fuel, wood, timber, shelter, fruits, leaves, bark, roots, and are source of medicinal products in addition to benefits such as carbon sequestration, water shed protection, and habitat for 1/3 of terrestrial species. However, the genetic analysis and breeding of trees has lagged behind that of crop plants. Therefore, systematic conservation, sustainable improvement and pragmatic utilization of trees are global priorities. This book provides comprehensive and up to date information about tree characterization, biological understanding, and improvement through biotechnological and molecular tools.

Algae have been used since ancient times as food, fodder, fertilizer and as source of medicine. Nowadays seaweeds represent an unlimited source of the raw materials used in pharmaceutical, food industries, medicine and cosmetics. They are nutritionally valuable as fresh or dried vegetables, or as ingredients in a wide variety of prepared foods. In particular, seaweeds contain significant quantities of protein, lipids, minerals and vitamins. There is limited information about the role of algae and algal metabolites in medicine. Only a few taxa have been studied for their use in medicine. Many traditional cultures report curative powers from selected alga, in particular tropical and subtropical marine forms. This is especially true in the maritime areas of Asia, where the sea plays a significant role in daily activities. Nonetheless, at present, only a few genera and species of algae are involved in aspects of medicine and therapy. Beneficial uses of algae or algal products include those that may mimic specific manifestations of human diseases, production of antibiotic compounds, or improvement of human nutrition in obstetrics, dental research, thalassotherapy, and forensic medicine.

Learning across Generations in Europe: Contemporary issues in older adult education constitutes an important book in the emergent field of study of older adult learning. The book gives a clear and wide overview on the different concepts, ideas, and meanings, related to older adults' education, learning and intergenerational learning through strong theoretical standpoints, empirical research, and policy directions. The field of older adult education has expanded immensely in recent years since it raised questions that are connected to a rapidly ageing society in very turbulent times of economic and social changes in Europe. This book provides the basis for an in-depth analysis of the understandings and interpretations of education and learning in later-life, rethinking the development of different approaches for education of older adults, as well as diverse research and evaluation of different forms of older adults' education and learning. It brings together both orthodox approaches to educational gerontology and older adult learning on important emerging issues faced by educators around the globe. The chapters address the contemporary differentiated discussion on diverse phenomena labelled ranging from intergenerational learning to older men learning, providing robust impulses for the development of further theoretical and empirical research on older adult and intergenerational learning. It is the editors' intention that this collection of papers acts as a persuasive argument for formal and non-formal learning agencies to open more doors for older adults.

“There are moments when a story shakes you...Barely Missing Everything is one of those stories, and Mendez, a gifted storyteller with a distinct voice, is sure to bring a quake to the literary landscape.” —Jason Reynolds, New York Times bestselling author of *Long Way Down* In the tradition of Jason Reynolds and Matt de la Peña, this heartbreaking, no-holds-barred debut novel told from three points of view explores how difficult it is to make it in life when you—your life, brown lives—don't matter. Juan has plans. He's going to get out of El Paso, Texas, on a basketball scholarship and make something of himself—or at least find something better than his mom Fabi's cruddy apartment, her string of loser boyfriends, and a dead dad. Basketball is going to be his ticket out, his ticket up. He just needs to make it happen. His best friend JD has plans, too. He's going to be a filmmaker one day, like Quentin Tarantino or Guillermo del Toro (NOT Steven

Spielberg). He's got a camera and he's got passion—what else could he need? Fabi doesn't have a plan anymore. When you get pregnant at sixteen and have been stuck bartending to make ends meet for the past seventeen years, you realize plans don't always pan out, and that there are some things you just can't plan for... Like Juan's run-in with the police, like a sprained ankle, and a tanking math grade that will likely ruin his chance at a scholarship. Like JD causing the implosion of his family. Like letters from a man named Mando on death row. Like finding out this man could be the father your mother said was dead. Soon Juan and JD are embarking on a Thelma and Louise—like road trip to visit Mando. Juan will finally meet his dad, JD has a perfect subject for his documentary, and Fabi is desperate to stop them. But, as we already know, there are some things you just can't plan for...

The Devil, Inside and Out

Malaria is a mosquito-borne disease caused by parasitic protozoa that belong to the genus *Plasmodium*. This disease imposes a significant global health burden, claiming the lives of several thousand children and pregnant women each day. Increasing antimalarial drug resistance and the complexity of the *Plasmodium* life cycle, among other factors, have made eradication difficult. Written and edited by experts in the field, this collection from Cold Spring Harbor Perspectives in Medicine examines the biology, pathology, and epidemiology of malaria, as well as ongoing efforts to treat infections and manage their spread. Contributors discuss the *Plasmodium* life cycle, focusing on the molecular mechanisms by which the various parasitic stages induce clinical symptoms, interact with the immune system, and lead to further transmission of malaria. They also explore topics such as the interaction between mosquito reproduction and *Plasmodium* development, epigenetic regulation of malaria-associated genes, and unique features of malaria in pregnant women (e.g., parity-dependent susceptibility) and describe how an improved understanding of these phenomena may lead to novel intervention strategies. The driving forces behind antimalarial drug resistance are covered, as is progress in developing an effective vaccine and controlling mosquito populations. This volume is therefore an essential reference for all scientists, clinicians, and public health professionals interested in understanding malaria and reducing its devastating effects.

Death is the destiny we all share, and this will not change. Yet the way we die, which had remained the same for many generations, has changed drastically in a relatively short time for those in developed countries with access to healthcare. For generations, if people were lucky enough to reach old age, not having died in infancy or childhood, in childbirth, in war, or by accident, they would take to bed, surrounded by loved ones who cared for them, and fade into death. Most likely, they would have seen their parents and grandparents die the same way, and so this manner of dying would be familiar: it was part of the natural cycle of life. Now less than 25 per cent of Americans die at home, having reached much older ages than people would have dreamed of in past generations, often after surviving many illnesses and even diseases that would have been terminal for their grandparents. We are fortunate to live (and die) today, supported by myriad scientific, medical, and technological advancements, however we also face new problems as a result of the new way in which we die. We can no longer anticipate a peaceful waning at home with family. We know our lives will likely end in hospitals likely after we have endured grueling treatments to prolong life. We have to decide what decisions we want our loved ones, or care-givers, to make when we cannot choose for ourselves. We have to think about whether in any circumstances we would seek physician-assisted death. We know we face other questions as well, but we may not even know where to start. In the face of these decisions, we can feel daunted and afraid. The best remedy is information and planning. In this book, Gregory Eastwood - a physician who has cared for dying patients, served as an ethics consultant, and taught end of life issues to medical and other health profession students - draws from his substantial experience with patients and families to provide the information that will help us think clearly about the choices and issues we will face at the end of our own lives, and when faced with the deaths of our loved ones. With sensitivity and profound insight, Eastwood guides us through all the important questions about death and dying in straightforward, clear language, enhanced by real-life stories. Throughout, he shows us how we can take ownership of the

way we want to die, when we must die, and feel more in control as death approaches.

Dobrovi? in Dubrovnik traces the past and the present of avant-garde modern architecture constructed in the nineteen- thirties, in the Mediterranean landscape of the south Dalmatian coast of the Adriatic Sea. Comprehensive historical, theoretical, and phenomenological readings of events and forms, in two essays by architects Krunoslav Ivanišin and Ljiljana Blagojevi? respectively, describe a specific yet, by its spirit, universal Venture in Modern Architecture. Spatially condensed to an area within ten square miles and temporally to less than ten years, these quintessentially modern villas, gardens, and hotels built seventy years ago by the architect Nikola Dobrovi? (1897-1967), are presented through previously unpublished original design drawings, black and white photographs from the period of their construction, and the contemporary color photographs by Wolfgang Thaler. The color plates depict precisely the beauty in decay of heroic works of international modern architecture and convey admirably their meaningful Mediterranean resilience.
